SAP ABAP Third week- Assessment 1

15 Questions, 30 minutes

Points: 12/15 Time: 11:41

✓ **Correct** 1/1 Points

1. Let's assume there is a class C1 which has an event definition E1 and in class C2 there are 2 methods m1 and m2 implemented for the event e1 of class C1. To trigger, both the methods, what needs to be done?

- (●) create object: r1,r2. Set handler: r2->m1 for r1, r2->m2 for r1. "r1 and r2 are ref of C1 and C2 respectively
- ( ) create object: r1. Set handler: r1->m1, r1->m2. "r1 is ref of C1
- ( ) create object: r2. Set handler: r2->m1, r2->m2. "r2 is ref of C1
- ( ) create object: r1,r2. Set handler: r1->m1 for r2, r1->m2 for r2. "r1 and r2 are ref of C1 and C2 respectively

✓ **Correct** 1/1 Points

2. what is the syntax to raise class based exception

- ( ) raise <exception_id>
- ( ) raise <exception_class>
- (•) raise exception type {exception_class} exporting textid = {exception_class}=>{exception_id}
- ( ) raise exception type {exception_class} importing textid = {exception_class}=>{exception_id}

3. Enter your full name:

EDWIN JOJU

✓ **Correct** 1/1 Points

4. what is output of below code:

```
CLASS cl_demo DEFINITION.
  PUBLIC SECTION.
    CLASS-METHODS: main.
    DATA: text TYPE string VALUE 'Hello World!'.
ENDCLASS.

CLASS cl_demo IMPLEMENTATION.
  METHOD main.
    WRITE: / text.
  ENDMETHOD.
```

```
ENDCLASS.

START-OF-SELECTION.
  cl_demo=>main().
```

- ( ) It outputs "Hello World!".
- (•) It results in a compile-time error.

✓ **Correct** 1/1 Points

5. What will be output of below code?

```
" Let's assume there is a class cl_student which has a public attribute marks.
DATA: ref1 TYPE REF TO cl_student.
ref1->marks = 80.
WRITE: ref1->marks.
```

- ( ) Syntax error
- ( ) 80
- (•) Runtime error

✗ **Incorrect** 0/1 Points

6. When using ABAP Objects with ALV, how are events such as a double-click on a row typically handled?

- ( ) By implementing a handler method in a local class that reacts to the event.
- (●) By modifying the REUSE_ALV_GRID_DISPLAY function module to include custom code.
- ( ) Events cannot be handled when using REUSE_ALV_GRID_DISPLAY; a different ALV function must be used.
- ( ) By using a subroutine within the same report that includes the ALV display.

✓ **Correct** 1/1 Points

7. Inside STATIC method, instance variable can be used.

- ( ) True
- (●) False

✓ **Correct** 1/1 Points

8. Which of the following statement is used to create a static attribute?

- ( ) DATA
- (●) CLASS-DATA
- ( ) LIKE

- ( ) STATIC

9. Enter your shared email id:

   ejoju@deloitte.com

✕ **Incorrect** 0/1 Points

10. Which of the following is correct way to set a handler for an event.
    Assume,
    - gr_trigger is a ref of class cl_trigger where event is defined
    - gr_handler is a ref of class cl_handler where handler method is defined
    - my_event is name of an event defined in class cl_trigger
    - my_handler is name of an event handler method defined in class cl_handler
    - objects are created for both classes

- ( ) SET HANDLER gr_handler->my_handler FOR gr_trigger.
- (•) SET HANDLER gr_handler->my_handler FOR my_event.
- ( ) SET HANDLER gr_handler->my_event FOR gr_trigger.
- ( ) SET HANDLER gr_handler->my_handler FOR gr_trigger OF cl_trigger.

✓ **Correct** 1/1 Points

11. What is the primary purpose of using classes and objects in ABAP OOP?

- ○ To facilitate data transport between database tables.
- ◉ To encapsulate data and behavior that are logically related into manageable units.
- ○ To replace all procedural programming in SAP systems.
- ○ To increase the execution speed of applications

✓ **Correct** 1/1 Points

12. Is it mandatory to call super class constructor in a child class constructor?

- ◉ Yes
- ○ No
- ○ Maybe

✓ **Correct** 1/1 Points

13. Which of the events are available for a screen?

- [x] Process before output
- [ ] Process before action
- [x] Process after input
- [ ] AT SELECTION SCREEN
- [ ] START-OF-SELECTION

✓ **Correct** 1/1 Points

14. Which of the following keyword is used to define an event in a class?

- (●) EVENTS
- ( ) RAISE EVENT
- ( ) FOR EVENTS
- ( ) CLASS_EVENTS

✓ **Correct** 1/1 Points

15. Which of the following are advantages of SALV report over ALV report generated by container and grid class?

- [x] Aggregate operations : total, min, max , avg are possible
- [x] No screen creation is required
- [ ] One single class for all the types of ALV (list, grid, hierarchy, tree)
- [ ] Event handling

✕ **Incorrect** 0/1 Points

16. Which of the following is correct way to call method M2 in child class C2 which is inherited from class C1.

- ( ) DATA: r1 TYPE REF TO C1. create object r1. r1->m2( ).
- ( ) DATA: r1 TYPE REF TO C2. r1->m2( ).
- (•) DATA: r1 TYPE REF TO C1. create object r1 TYPE C2. r1->m2( ).
- ( ) DATA: r1 TYPE REF TO C2. create object r1. r1->m2( ).

✓ **Correct** 1/1 Points

17. Let's assume we have interface I1 and I2 which consists of a method M1 with the same name. Which of the following statement is TRUE ?

- [x] Class c1 can implement both the interfaces using statement INTERFACES: I1,I2 and implement method I1~M1 and I2~M2 respectively
- [ ] Class c1 can implement only one interface at a time
- [ ] Class C1 can implement both the interfaces with statement INTERFACES: I1, I2. But implement only method m1 for both the interfaces
